ABSTRACT

Use 8.5 x 11 paper size, with 1" margins on all sides. A required 200-250 word abstract starts on this line. Leave two blank lines before "ABSTRACT" and one after. Use 11 point Times New Roman here and single (11 point) spacing. The abstract is a very brief summary highlighting main accomplishments, what is new, and how it relates to the state-of-the-art.

KEYWORDS

List of at most five key words

1. INTRODUCTION

Paper starts here with two blank lines before the first section title. Use 8.5 x 11 paper size, with 1" margins on all sides. Use one blank line before and after each subsequent section's title. Section titles have style "Heading 1," are **11 point font**, must be all uppercase and text aligned left, and must be numbered in Arabic numerals as shown above. Introduce the topic of your work in this section.

Do not indent the first line of a paragraph; rather add one blank line between paragraphs. Use Times New Roman font (and Symbol if needed) and **font size 11** for the main body of the paper. There are four types of reference styles: journal paper [1], proceeding paper [2], book [3], and website [4]. References to websites are discouraged, but acceptable if absolutely necessary.

It is the author's responsibility to check links in the PDF file of your paper. All references should be cited in the text in numerical order, in order of appearance as [5-7]. Do not include bookmarks or

hyperlinks to references, figures, and tables in the text of your paper in your final PDF document. Do not include highlighting, page numbers, headers, or footers.

Because the paper will be included as a .pdf file for the proceedings, the author will get the best results from Word or WordPerfect by using the Acrobat Distiller or Acrobat PDFWriter as the default printer. When creating the PDF version, check the “Embed All Fonts” option. Note that it is the author’s responsibility to review the final PDF version of the paper to ensure proper translation into PDF. Final PDF file size should be no more than 4 MB. **The page limit for ASRAM 2026 papers is 14 pages. Papers with more than 14 pages will be rejected.** If an exception is made and a paper over 14 pages is accepted, page charges are \$100/page for p. 15 and above.

2. SECOND OR SUBSEQUENT MAJOR HEADING (FONT SIZE 11 POINT)

A logical division of your paper into sections, etc., makes it so much easier to understand. The style for subsection titles and all text in this template is “Heading 2,” “Heading 3,” etc. All text in this template is “Body Text 3.” Make sure to *avoid widow/orphan lines*.

2.1. Subsection Title: First Character of Each Non-Trivial Word is Uppercase (11 point)

Add a blank line before and after secondary titles. Secondary titles should start flush left and are numbered as illustrated above.

Equations should be centered and sequentially numbered to the flush right of the formula. Use Times New Roman or Euclid font with a font size 11 for the text variables and corresponding sizes proportionally for the subscripts and superscripts.

$$\partial_x U_k + \partial_x F_k(U) = \partial_x K U_k^{3/2} \partial_x U_k \quad (1)$$

The continuation of a paragraph after an equation is not indented. All paragraphs, section or subsection headings, as well as equations are separated by just one single empty line.

2.1.1 Sub-subsection level and lower: only first character uppercase (11 point)

Figures and tables should appear as closely as possible to where they are first cited, e.g., Fig. 1. Figures are numbered in Arabic numerals, with the caption centered below the figure, in **boldface**. Use two blank lines before the figure and after the figure caption.

When importing figures or any graphical image please verify two things:

- Any number, text or symbol is in Times New Roman font and is not smaller than 10 point after reduction to the actual window in your paper;
- That it can be translated into PDF.

Tables, such as Table 1, are numbered in Roman numerals, with the table title in **boldface** centered above the table with a blank line between the title and actual table.

Use SI Units. Conventional (non-SI) quantities may follow parenthetically if the author desires.

Figure1. SampleFigure.

Table1. Sampletable: accuracy of nodal and characteristic methods

Mesh	8 x 8	16 x 16	32 x 32	64 x 64
Nodal	1.000×10^{-1}	2.500×10^{-2}	6.250×10^{-3}	1.563×10^{-3}
Characteristic	1.000×10^{-1}	2.500×10^{-2}	6.250×10^{-3}	1.563×10^{-3}

3. CONCLUSIONS

Present your summary and conclusions here.

NOMENCLATURE (IF NEEDED)

If variables are extensively used in the text, a Nomenclature section would be helpful to the readers.

ACKNOWLEDGMENTS

Acknowledge the help of colleagues, and sources of funding, if you wish.

REFERENCES

List references here, according to their first use in the paper. Include the following information (as applicable). Do not include these sentences in the full paper.

1. B.C. Author(s), "Title of the Journal Paper," *Journal Name in Italic*, **Volume in Bold** (followed by the issue number in parentheses if known, see Ref. 5 below), pp. 34-89 (2007).
